Electronic Medical Records and Patient Management Solution

With robust features and competitive pricing, Bond Clinician from Bond Technologies provides an attractive path to implement a “State of the Art” health records solution that will move a practice or clinic into the Medical Office of the Future. No other product provides more tools to help you provide better medicine while controlling costs.

Bond Clinician provides

- **Long Term Cost Reductions** resulting in positive return on the investment with a corresponding positive impact on the financial bottom line.
- **Compatibility with Electronic Records Requirements** resulting in government compliancy.
- **Insurance Billing Compatibility** resulting faster payments.
- **Medical Instrument Compatibility** allows automated collection and data entry of patient vitals and other information.
- **Disease Care Reviews** make sure that important aspects of diseases and follow up requirements are reviewed and scheduled -- complete with reminders.
- **Compatibility with Dragon Medical Speech Recognition** providing higher provider productivity rates, better documentation and higher adoption rates by providers.
- **IntelliHistory™** streamlines the patient interviewing process to create better records in less time.
- **Image Management** is built into Bond Clinician so scanned documents and medical images are easily added and retrieved as part of the medical record.
- **Medical Decision Support Tools** provides integrated access to Disease and Drug Databases (including Thompson Microme-dex) and Best Practices Protocols to assist with diagnosis and prescriptions.
- **Kiosk Portal** allows patients to enter information directly into Bond Clinician from the waiting room.
- **Patient Web Portal** allows patients to access designated medical record information and test results from home through a secure internet connection.
- **Doctor Web Portal** makes patient information available through secure internet access.
- **Device Transportability** allows Bond Clinician to be accessed not only from Desktops, Laptops, and Tablet PCs but information can be accessed by PDAs, Pocket PCs and other mobile devices as well.
- **Current Technology:** Using Microsoft’s advanced ASP.Net Framework allows fast system updates, configurations that suit each user’s individual needs, and the structure to support secure communications with mobile devices.
- **Optional Integrated Patient Management or Patient Management Bridge** to existing systems allows Bond Clinician to be used independently or with most existing Patient Management systems.
- **And Many More Features** to streamline your workflow and maximize your productivity and income.

Bond Clinician includes many additional features for specific medical specialties.
