EXAQ
Micro Services

Company Background

EXAQ Micro Services has been providing Business Productivity Solutions for over 15 years in the Sacramento area and through out the Western States. Our areas of expertise include:

Computer Training and Support

Onsite individual and classroom training is available for the Windows productivity applications and utilities that we support for our clients including MS Word, Excel, WordPerfect, R:Base, NaturallySpeaking, PaperPort, OmniForm, and OmniPage.

Speech Recognition

Using Dragon NaturallySpeaking, professionals, executives, managers and line staff can dictate directly into a word processor such as MS Word at rates over 100 words per minute with better than 97% accuracy. This technology provides faster document turn around, higher document accuracy and lower document generation costs.

EXAQ Micro Services has been assisting doctors, lawyers, and other business users to be successful with this technology and to recoup the maximum return on their investment. The return on investment with this technology is so good that the break even point is usually less than 6 months.

Database Management Systems

Using R:Base, EXAQ Micro Services has been assisting entrepreneurs, managers, and corporations to maximize their information tracking abilities with a minimum impact on their budget. R:Base provides power and functionality that rivals Oracle without the cost and offers far more than MS Access without the complexity of Visual Basic. R:Base's unique blend of entry level and advanced development tools has made it a solid, economical, and powerful information tracking tool since the 1970s.

Paperless Office Solutions

Electronic forms and desktop imaging and image management solutions can substantially reduce paper, copying and filing expenses while making documents more available to those who need them and less likely to be lost. Implementing these technologies at the individual or office level can provide a very high return on the investment.

Enabling Solutions

Jaws for Windows
NaturallySpeaking

We use our expertise in these productivity technologies to provide enabling solutions for individuals or organizations requiring alternate keyboard solutions for Reasonable Accommodation, Workers Compensation, or Americans with Disabilities Act (ADA) issues.

Speech Recognition for Business and Professionals

When properly installed, configured, and supported **Naturally**Speaking® can usually provide dictation transcription at 50-100 words per minute or more with 98% or better accuracy.

Productivity

You can now create your letters, reports, emails, or other text document as fast as you can speak clearly. Simple edit and correction commands make document revisions and edits a snap.

Legal - Medical - Business

Legal & Medical professionals, transcriptionists, corporate executives, managers, and line staff are all now using NaturallySpeaking to reduce document turn-around time, while increasing document quality and accuracy, and decreasing document generation expenses.

When properly installed and supported the Return On Investment (ROI) for NaturallySpeaking often has a break even point at about 6 months*. After that Speech Recognition doesn't cost, it pays!
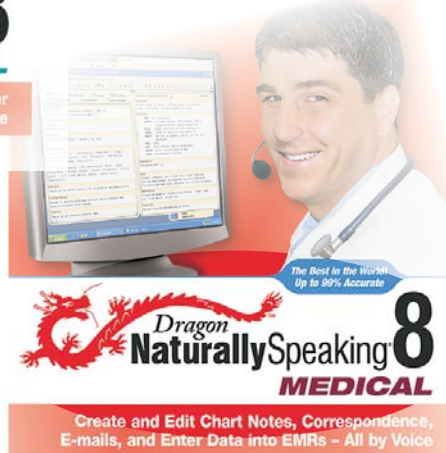

Risk Management

Risk Managers are also using NaturallySpeaking to take a pro-active approach to Repetitive Stress Injuries. NaturallySpeaking can substantially reduce workman's compensation claims and keep valuable employees working at full capacity. *Section 508 Certified.*

* Break even points vary depending on the implementation strategies and the efficiencies gained. Installations that maximize the effectiveness of the Speech Recognition often have a higher initial cost due to the development of custom macros and templates. However, these installations generally have a higher Return On Investment and a shorter breakeven point as a result of the decreased learning curve and substantially higher productivity rates provided by the macros and templates.
