

*Announces the release of*  
**DOR Voice Commands, Version 5**  
**For Dragon NaturallySpeaking versions 9 & 10**

**What are the DOR Voice Commands?**

The **DOR Voice Commands** are a suite of NaturallySpeaking macros and supporting documentation. The commands enable counselors and other staff members at the Department of Rehabilitation to quickly and effectively access DOR applications including CIDOR to update mainframe client notes and other information by voice using Dragon NaturallySpeaking. The **DOR Voice Commands** have been adopted statewide by the Department of Rehabilitation to address menu navigation and notes entry issues that arise when attempting to use NaturallySpeaking in a 3270 emulation environment such as **HWDC and CIDOR** to access mainframe information by voice.

**DR Macros Note:** The **DOR Voice Commands** are a complete upgrade for the old **DR Macros** purchased by the Department of Rehabilitation prior to 2003. The DR Macros were written for NaturallySpeaking version 5 and an older version of the Passport 3270 emulation software used previously by the department. The **DOR Voice Commands** provide all of the functionality of the prior DR Macros and much, much more.

***New in Version 5!***

- Enhanced compatibility with **NaturallySpeaking version 10**
- **Enhanced menu navigation commands.** Cut the number of steps to navigate to a specific screen in half!
- **A completely new Login Command** that allows you to change your login information for up to 5 applications (CIDOR/Passport, Lotus Notes, etc.) with a single command. It is no longer necessary to remember how to edit the command in Command Browser to make the required periodic password changes.
- **Login Password encryption.** Passwords are now stored in an encrypted format.

**Availability** The DOR Voice Commands version 5 is available from EXAQ, Inc.

**Pricing** All License and Upgrades include a one year support contract.
